Avira

PC Cleaner
Second opinion for better security

BACKGROUND

Even if you have antivirus software installed and you keep your operating system and all other software up-to-date, sometimes you can't shake off the feeling that your PC is behaving strangely and might have a virus. Malicious software programs such as Trojans, viruses, and bots are becoming increasingly sophisticated and aggressive. So even with antivirus software and all necessary software updates installed, your computer can still become infected. If this were to happen, it would be helpful to have a second opinion. It is definitely not a good idea to install a second antivirus software program – the two programs would just get in each other's way.

THE AVIRA PC CLEANER

Avira has developed the free PC Cleaner for precisely this purpose. The special thing about the Avira PC Cleaner is that the software does not need to be installed. This means that it does not affect the system environment and, therefore, will not come into conflict with antivirus software from other manufacturers. With the PC Cleaner, every user can now obtain a second opinion – in fact, it is also known as a „2nd opinion scanner". The PC Cleaner uses Avira detection routines that have been tried and tested countless times before.

Every time you launch the PC Cleaner, the latest virus detection patterns are downloaded from our servers.

## SCANNING, DETECTING, and CLEANING

The Avira PC Cleaner does more than just detect malicious software. It goes without saying that any malicious software that is detected must be removed from the system. The Avira PC Cleaner can help you here too with just a single click.
